1. With an image PDF that does not yet have selectable text, click on the “Tools” tab on the upper right hand of the document window.
2. Midway down the dropdown menu, you will click on “Recognize text” and then “In this file”. This will open the recognition dialog box.
3. You can have it recognize all pages or a range of pages. To change the recognition language, you will need to click on the “Edit” button under the Settings. Select your language from the dropdown menu.
4. Once the recognition process is complete, you will need to save your file.
5. At this point, the text should be selectable and therefore readable using a variety of text-to-speech tools.
